

ARKADIUSZ LEWANDOWSKI

UNITY / C# SOFTWARE ENGINEER

lewandowskiarek3@gmail.com | Warsaw, Poland / Remote | LinkedIn | GitHub

PROFESSIONAL PROFILE

Unity and C# engineer with 6+ years of commercial experience shipping mobile games, tools, and interactive applications across iOS, Android, and PC. End-to-end ownership of Unity client development, service and SDK integrations, monetisation, analytics, build automation, store delivery, and production optimisation. Experienced working independently and in distributed teams from technical design through release.

PROFESSIONAL EXPERIENCE

Independent Unity Developer - Self-employed

September 2022 - Present | Warsaw, Poland / Remote

- Shipped multiple Unity products on iOS and Android, owning client engineering, backend services, monetisation, analytics, automated builds, store submission, and release distribution.
- Designed reusable, data-driven runtime systems for independently produced mobile titles, supporting rapid iteration and maintainability across the product lifecycle.
- Integrated Firebase Realtime Database, Auth, Remote Config and Cloud Functions with Unity IAP, AdMob, Unity Ads, GameAnalytics and Unity Analytics.
- Delivered a commercial Unity planning application with 2D/3D authoring, zoning and spatial validation, and anchor-based building placement; managed delivery in Git/GitHub and Jira.

Unity Developer - Superheart Studios Inc.

February 2023 - January 2024 | Remote

- Delivered client features for Tap Oceans Reef Rescue and completed its iOS-to-Android port, resolving platform-specific defects and performance issues.
- Integrated in-app purchases and worked with the project's proprietary database wrapper; contributed to code reviews, sprint planning, and release delivery.

Unity 3D Developer (Contract) - SafeMoon Inu / SMI Play

November 2021 - July 2022 | Remote

- Implemented core client architecture and gameplay logic for a top-down action title, covering progression, AI, and state orchestration.
- Delivered a tower-defence mode with pathfinding and wave orchestration, and integrated Enjin SDK ownership and smart-contract flows.

Junior Unity Developer - Wireless Games

January 2020 - July 2021 | Krakow, Poland / Remote

- Maintained and extended multiple Unity mobile projects, integrating ad monetisation, in-app purchases, analytics, and production services across iOS and Android.
- Improved runtime efficiency through CPU and memory profiling, draw-call reduction, and asset optimisation while collaborating with design and art in a Scrum team.

Junior Unity 3D Developer - BTC Labs

March 2019 - October 2019 | Warsaw, Poland / Remote

- Developed two Unity prototypes for Gansu Chronicles, evolving the product from a top-down action concept into a first-person survival and building game.
- Owned implementation across core client functionality, persistence, simulation, UI, and physics-driven construction systems.

ENGINEERING PROFILE

Production Unity Development

Commercial client delivery across shipped mobile games, tools, and B2B applications for iOS and Android.

Feature Ownership

Technical design through implementation, service integration, build distribution, store submission, and release support.

Client Architecture

Modular, data-driven client systems designed for maintainability and rapid product iteration.

Performance & Reliability

Profiling and optimisation across CPU, memory, rendering overhead, asset loading, and platform-specific issues.

Backend & Platform Services

Firebase Realtime Database, Firestore, Auth, Remote Config, and Cloud Functions.

Monetisation & Product Data

Unity IAP, Google AdMob, Unity Ads, GameAnalytics, Unity Analytics, and event instrumentation.

Build & Release

Automated build and distribution with Unity Cloud Build and Firebase App Distribution, plus iOS/Android store delivery.

TECHNOLOGY

Core Stack

Unity, C#
Firebase, Addressables
Unity Cloud Build
Git, Git LFS, GitHub

Platforms & Languages

Platforms: iOS, Android, PC
Polish: native
English: professional working proficiency
